
Generator Specification Sheet - 1 MHz

Generator Frequency:	1 MHz
Generator Power:	1,500 watts maximum per generator, provided from five 300-watt interchangeable self-tuning modules
Generator Size:	1500-Watt Model: 17.5" L-R x 16.0" F-B x 9.25" High 900-Watt Model: 13.5" L-R x 16.0" F-B x 9.25" High 600-Watt Model: 9.25" L-R x 16.0" F-B x 9.25" High 300-Watt Model: 7.25" L-R x 16.0" F-B x 8.0" High
Generator Features:	Megasonic Sweeping frequency-sweeping \pm 15 kHz Full digital operation with input/output monitoring/control from lighted front panel or remotely via 25-Pin D-Sub connection or Devicenet™ RS485/RS232 interface Front panel displays frequency, power and temperature Generator automatically tunes and matches to transducer array Solid state construction, high efficiency circuit with low heat dissipation RFI filter (in compliance with FCC regulations) Lighted on/off switch/power indicator Axial cooling fan on generator case
Power requirements:	200-240 volts 50/60 Hz, 1 phase 15.0 amps
